

AgreeYa provides end-to-end Software Testing services to help enterprises deliver high quality software resulting in competitive advantage and time-to-market acceleration.

AgreeYa provides Independent Software Testing services based on CMMI Level 5 methodologies and processes for applications and products. We select tools and methods to match our customers' technical, budget, and schedule requirements, or use our customers' standard tools and processes.

With services ranging from single instance testing, comprehensive software quality assurance (SQA) process assessments, to fully retained outsourcing of entire SQA and software testing functions, our test labs consistently deliver the technical and business predictability expected out of software applications and products. Our O³ (onsite-offsite-offshore) delivery model ensures round-the-clock testing, providing the flexibility our customers need and the Return on Investment (ROI) they expect.

We provide end-to-end testing services which include planning, design, scripting, manual and automated testing, reporting, and analytics.

AgreeYa offers the following types of testing:

Functional Testing

- Unit Testing
- System & Integration Testing
- Regression Testing
- Smoke/Sanity Testing
- User Acceptance Testing

Non-Functional Testing

- Load Testing
- Volume Testing
- Stress Testing
- Spike Testing

SUCCESS STORIES

Product Testing for a leading provider of Electronic Trading Solutions

Being an Independent Software Vendor (ISV), this leading provider of electronic trading solutions realized that reliability and robustness were critical success factors for their products. AgreeYa was contracted to test their Order Management System product and help developers launch defect-free versions. The challenges that AgreeYa confronted were:

- Provide a zero-defect product
- Leverage offshore testing capability and augment onsite team
- Quicker go-to-market

The project scope included Functional Testing, Load Testing, Performance Testing and Security Testing in addition to tasks such as: creation of test scripts, test bed set up, defect tracking and reporting.

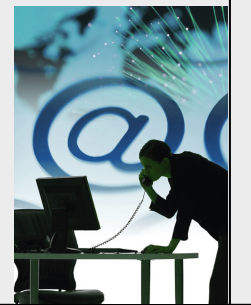

By leveraging our O3 (onsite-offsite-offshore) delivery model, AgreeYa was able to expedite the development and testing process resulting in quicker go-to-market and a reduced Total Cost of Ownership (TCO) for the Customer.

Application Testing for a large Wireless Communications provider

This large US wireless communications provider operates live B2B and B2C portals in which new functionality and features warrant continuous integration testing and test script maintenance. Since the features have to go live by specific deadlines, end-to-end testing and defect closure are essential. Performance is also an important test criterion for such a large e-commerce site.

AgreeYa was engaged by the Customer to provide testing of the portals, logging the defects and tracking them to closure. The scope of work included:

- Test plan creation
- Manual testing
- Automated testing
- Testing and Defects Tracking

AgreeYa achieved remarkable process efficiency, nearly always delivering a zero defects application and zero test schedule variance. This provided the Customer with quality assurance of their B2B and B2C portals and accelerated go-to-market.
